EXPERIENCE

Software Engineer

IBM

📅 Dec 2025 – Present

📍 Bangalore, India

Stack: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, JUnit, Selenium

- Building backend services for SAP SuccessFactors cloud integrations using **Java** and **Spring Boot**, with **Spring Data JPA**, **Hibernate**, and **Spring Security** + **JWT** for stateless authentication and bcrypt-based password handling.
- Integrated **asynchronous processing** via `@Async` and `@RabbitListener` for background tasks, applied `@Transactional` for data consistency, and wrote unit and integration tests using **JUnit** and **Mockito**.
- Identified and resolved **30+** critical defects during functional testing of cloud integrations, preventing production rollbacks and improving release stability by **15%**.

ACHIEVEMENTS

- **LeetCode**: Solved **281+** problems with Global Rank **Top 13%**; proficient in core algorithms and data structures.
- **Hackathons**: **3x Finalist** (1 Regional, 2 University-level); recognized for rapid prototyping and scalable backend design.
- Built multiple production-grade backend systems spanning CLI infrastructure, scalable APIs, and distributed image processing.

TECHNICAL SKILLS

- **Programming Languages**
 - Java, JavaScript, TypeScript, Python, C++, SQL
- **Frameworks & Libraries**
 - Spring Boot, Spring Security, Spring Data JPA, Hibernate, Node.js, Express, Bun, BullMQ, Mongoose
- **Databases & Messaging**
 - MongoDB, MySQL, Redis, RabbitMQ
- **DevOps & Tools**
 - Docker, Linux, Bash Scripting, CI/CD, Git
- **Testing**
 - JUnit, Mockito, Selenium, Playwright, Cypress
- **Coursework**
 - Operating Systems, Computer Networks, Object Oriented Programming, Database Management Systems, Data Structures & Algorithms, Software Engineering

EDUCATION

B.E. (CSE) – 7.28 CGPA

Visvesvaraya Technological University

📅 Sept 2021 – June 2025

📍 Belgavi, India

PROJECTS

Database Backup CLI Infrastructure

Stack: TypeScript, MongoDB, MySQL, Node.js, Linux, Bash

- Engineered a production-grade automation CLI for asynchronous database backups, reducing manual deployment and migration time by **80%**.
- Architected a stream-based processing pipeline to reliably handle up to **50GB** data migrations while maintaining a memory footprint under **150MB**.
- Designed automated error handling and recovery protocols, achieving a **99.9%** backup success rate across distributed environments.

• [Github](#)

Project Management Engine

Stack: Express, MongoDB, Redis, Docker, BullMQ, JWT

- Designed and deployed a scalable backend supporting **25+** REST endpoints with granular Role-Based Access Control (RBAC).
- Optimized core API response times to under **120ms** via efficient indexing and Redis-backed caching.
- Integrated asynchronous notification pipelines using **BullMQ** and **Redis**, cutting cache latency by 15ms and improving background throughput by **40%**.

• [Github](#)

Distributed Image Processing Backend

Stack: Bun, Node.js, Express, MongoDB, Mongoose, Sharp

- Architected a scalable image processing and delivery service featuring dynamic file transformations, reducing average image payloads by **40%** while maintaining visual quality.
- Engineered robust **Mongoose** schemas to manage complex image metadata, improving query response times by **25%** on high-throughput reads.
- Implemented streaming-based upload and transformation flows to keep memory usage low under concurrent load.
